## Create a new repository

A repository contains all project files, including the revision history. Already have a project repository elsewhere? [Import a repository.](#)

Required fields are marked with an asterisk (\*).

Owner \*

 NanocomStudios ▾

Repository name \*

/ 231165-SCS1303

✔ 231165-SCS1303 is available.

Great repository names are short and memorable. Need inspiration? How about **fantastic-garbanzo** ?

Description (optional)

This is the corse introduction

**Public**

Anyone on the internet can see this repository. You choose who can commit.

**Private**

You choose who can see and commit to this repository.

Initialize this repository with:

**Add a README file**

This is where you can write a long description for your project. [Learn more about READMEs.](#)

Add additional files

Choose a license

License: None ▾

A license tells others what they can and can't do with your code. [Learn more about licenses.](#)

This will set  **main** as the default branch. Change the default name in your [settings](#).

 You are creating a public repository in your personal account.
